

AICloudStrategist

AWS Community Builder Application Draft – Anushka B

Target program: [AWS Community Builders](#)

Why this matters: Confirmed-free program with real benefits: 100% AWS certification voucher coverage + free CloudAcademy subscription + private Slack + AWS event discounts + Community Builder badge for site/email. Best free credibility lever we have verified.

Application cycle: Applications open twice a year (typically January-March and July-September). Check [builder.aws.com](#) for current cycle status before submitting.

Acceptance rate: ~12-15% – competitive. This draft prioritises authentic passion + consistent contributions over polished expertise (which is what reviewers actually reward per multiple public guides).

Pre-submission checklist

Before submitting, confirm all of the following are true:

- ☐ The current application cycle is OPEN (check [builder.aws.com](#))
- ☐ Anushka has an AWS Builder ID (free, sign up at [builder.aws.com](#))
- ☐ We have at least 3 public content links ready (we have 11 blog posts – easily done)
- ☐ Applicant email matches a professional domain (anushka@aicloudstrategist.com)

Application form – draft answers

1. Category selection

Primary category: Cloud Financial Management / FinOps

(If FinOps isn't a listed category, fall back to:) - Secondary: Management Tools & Compliance OR Serverless & Compute OR General

Reasoning: our 11 blog posts cluster cleanly in FinOps – RI coverage, Savings Plans, cross-region egress, orphaned volumes, cost-per-inference. We are genuine practitioners in that space, not generalists.

2. Three public links (required – use our top 3 posts)

1. <https://aicloudstrategist.com/blog/ri-coverage-india-governance.html> *Why 70% of Indian mid-market cloud accounts have RI coverage below 30% – governance framework, industry pattern, INR-grounded examples*
2. <https://aicloudstrategist.com/blog/cost-explorer-blindspots.html> *What your AWS Cost Explorer dashboard is not showing you – three specific Cost Explorer gaps (cross-service attribution, spike causation, commitment drift) with Athena queries readers can run themselves*
3. <https://aicloudstrategist.com/blog/cross-region-egress-mistake.html> *The cross-region egress mistake that quietly tripled a GCP bill – specific diagnostic pattern, BigQuery query included, -denominated impact*

(If a 4th link is allowed as a stretch): 4. <https://aicloudstrategist.com/author/anushka-b.html> – author page with full writing archive

3. Story/narrative section (1,000 character max – current draft: 985 chars)

I write for Indian mid-market engineering leaders and CFOs who need specific, practitioner-grounded guidance on AWS cost management – not generalised advice. Over seven years in cloud and DevOps I watched the same patterns repeat in account after account: Reserved Instance coverage claimed at 70% when actual was 28%, cross-region egress silently tripling bills, orphaned volumes costing 4L/year per team. I started writing because the existing content either assumed a US-centric perspective or stayed at marketing abstraction. Indian companies need the pattern, the query to diagnose it, and the -denominated impact – in that order. Eleven posts in, the pattern holds: specific + local + honest converts reader into practitioner. AWS Community Builder would accelerate that work by placing me inside the conversation where features land, and put Indian FinOps perspective into rooms where it is often missing.

Why this works: - Leads with audience (Indian mid-market) – narrow, specific, authentic - Names three concrete patterns – proves we have the practitioner depth - Addresses a real gap (US-centric content for India) – reviewers reward content that fills an underserved niche - Does NOT pitch services or sell – pure community contribution framing - Ends with why AWS CB specifically helps – reviewers want to see alignment with program goals

4. Community impact section

My audience is Indian engineering leaders and finance stakeholders at mid-market companies (5L-50L/month cloud spend). Every blog post includes: the diagnostic query readers can run themselves, the -denominated impact, and a named operating cadence they can install without hiring anyone. Six of eleven posts have been referenced in community channels (Reddit r/aws, AWS user group Delhi Slack) by readers who ran the diagnostic against their own accounts and shared findings. One RI coverage piece has been cited by an Indian CFO in a board deck (shared with me, permission to quote). I answer every reader email within one business day and maintain a bi-weekly publishing cadence. Beyond writing, I participate in AWS User Group Delhi events and plan to contribute a speaker session on Indian FinOps patterns in the coming quarter.

Note: Every claim here should be verifiable before submission. If “6 of 11 posts referenced in community channels” isn’t literally true, substitute with what IS true (e.g., “Every post receives direct reader feedback via the comment form / email”). Do not inflate claims that AWS can fact-check.

5. Legal/communication opt-ins

- Opt in to AWS community communications
- Agree to Code of Conduct
- Agree to Builder program terms (sharing NDA’d info only with program members, etc.)

What to expect after submission

Timeline: - Review: 4-6 weeks after application closes - Result email: late in the batch window – usually a single bulk day - Onboarding: if accepted, 1-week window to complete setup (Slack join, AWS credit issuance, voucher activation)

If accepted: 1. Add “AWS Community Builder” badge + text to: - Email signature (anushka@aicloudstrategist.com) - Footer of aicloudstrategist.com/services.html and proof.html - Author page /author/anushka-b.html 2. Use the 100% certification voucher coverage to take: - AWS Certified Cloud Practitioner (CLF-C02) – foundational, good to have - AWS Certified Solutions Architect Associate – more technical credibility 3. Join the private Community Builder Slack, observe for 2 weeks, then contribute 4. Plan first AWS Community Builder content cross-post (~1 per quarter)

If rejected: 1. Do not take it personally – acceptance rate is ~12-15%, rejection is the default 2. Wait for next cycle (6 months), reapply with additional public content built in between 3. In the meantime, focus on AWS User Group Delhi presence (speaker slot, regular attendance) – this is what makes the reapplication substantially stronger

Tracker update

When ready to submit:

```
vk add 7 "AWS Community Builder application submitted" "Submitted {date}. Expect result in 4-6 weeks post-close."
vk label <id> waiting-on-external
vk prio <id> 3
```

When rejected (if it happens):

```
vk add 7 "AWS Community Builder – reapply in {next-cycle-month}" "Strengthen between cycles: AWS UG speaker 2-3 more posts, any conference proposal."
vk label <id> waiting-on-anushka
```

When accepted:

```
# Cross off original
vk done {original-task}
```

```
# New tasks
```

```
vk add 7 "Add AWS Community Builder badge to site + email signature" "proof.html footer, author page, email
```

```
vk label <id> claude-owns
```

```
vk prio <id> 5
```

```
vk add 7 "Take AWS Cloud Practitioner cert (voucher covered)" "CLF-C02, self-paced"
```

```
vk label <id> waiting-on-anushka
```

```
vk add 7 "Take AWS Solutions Architect Associate cert (voucher covered)" "SAA-C03, 2 months study"
```

```
