

AICloudStrategist

Plausible Analytics Goals Setup

Current state: Plausible self-hosted at analytics.aicloudstrategist.com tracks pageviews + engagement (time-based). No conversion goals configured yet.

What we want: 5 conversion goals that tell us which pages drive what actions, so we can measure the sprint ruthlessly.

Goal 1 – Webinar registration (page-view goal)

Name: Webinar Registration **Type:** Pageview **Page URL pattern:** /webinar-confirmed.html **Why this works:** Google Form redirects the user here after successful submission. Pageview on this URL = confirmed registration. Clean conversion event, no JavaScript wiring needed.

Expected volume: 20-50 registrations per webinar × 1 webinar/month = 20-50 goal completions/month

Goal 2 – Discovery call booking started (page-view goal)

Name: Discovery Call Booking Started **Type:** Pageview **Page URL pattern:** /book.html **Why:** Anyone who lands on /book.html is high-intent. Even if they don't complete the Calendly booking, landing on this page is a stronger conversion signal than landing on /services.html.

Expected volume: 30-100 visits/month as traffic scales

Goal 3 – First-customer offer viewed (page-view goal)

Name: First-Customer Offer Viewed **Type:** Pageview **Page URL pattern:** /first-customer.html **Why:** Tracks whether our scarcity landing is getting eyeballs. High-intent visitors who read this page are much more likely to book than general traffic.

Expected volume: 20-80 visits/month

Goal 4 – Download lead magnet (outbound link goal)

Name: Lead Magnet Download **Type:** Custom event – outbound link click **Trigger:** Any click on /downloads/*.pdf (captured automatically by plausible-outbound-links.js script which is already loaded on our pages)

Why: Lead-magnet PDFs downloaded = top-of-funnel signal even without form-fill. Combined with referrer data, tells us which marketing channel produces real engagement.

Setup in Plausible admin UI: - Goal type: "Custom event" - Event name: File Download (default Plausible outbound-file event name) - Optional filter: URL contains "/downloads/"

Expected volume: 10-50 downloads/month

Goal 5 – Author page view (page-view goal, proxy for E-E-A-T interest)

Name: Author Page Viewed **Type:** Pageview **Page URL pattern:** /author/anushka-b.html **Why:** Visitors who click through to read about Anushka = evaluating credibility. Correlates to conversion intent. Low volume but every visit is meaningful.

Expected volume: 5-20 visits/month

How to configure these goals (5 min in Plausible admin)

Rajiv does this ONCE in the Plausible admin UI:

1. Log in to <https://analytics.aicloudstrategist.com> (admin account)

2. Go to site settings for `aicloudstrategist.com`
 3. Click "Goals" tab
 4. For each goal above:
 - Click "Add Goal"
 - Select type (Pageview for URL goals, Custom event for file downloads)
 - Paste the path (for URL goals) or event name (for custom)
 - Save
 5. Verify by visiting each URL manually → refresh the Goals panel → count should increment
- Total time:** 5 minutes for all 5 goals.

How to use the goals once configured

Weekly review (Monday mornings)

- Check Goals panel for last 7 days
- Answer three questions:
 1. Which traffic source produced the most goal completions?
 2. Which page had the highest conversion rate to goal?
 3. Any anomalies (10x spike or drop vs. prior week)?

Tracking sprint success

Minimum sprint targets (through 6 May 2026):

Goal	Floor	Target	Stretch
Webinar Registration	15	30	50
Discovery Call Booking Started	20	40	80
First-Customer Offer Viewed	30	75	150
Lead Magnet Download	30	80	200
Author Page Viewed	10	25	50

Hitting Floor on every goal = sprint is working. Hitting Target on 3+ = on track for first customer. Hitting Stretch on 2+ = signed SOW almost certain.

Weekly digest integration

Update `/docker/task-queue/bin/weekly-digest.sh` (already runs every Monday 09:00 IST) to include goal completions in the weekly Telegram summary.

Add this ClickHouse query to the existing script:

```
GOAL_EVENTS=$(query_db "
SELECT name, count() AS c
FROM plausible_events_db.events_v2
WHERE site_id = 1
AND name != 'pageview'
AND timestamp >= '${SINCE}'
AND timestamp <= '${NOW}'
GROUP BY name
ORDER BY c DESC
FORMAT TabSeparated
")
```

Include in the Telegram message block:

```
MSG="${MSG}
```

```
Conversions this week:
```

```
${GOAL_EVENTS:-none}
```

```
"
```

(Optional – I'll update weekly-digest.sh next if useful.)

Tracker task

```
vk add 7 "Configure 5 Plausible goals in admin UI (5 min)" "See 16-plausible-goals-setup.md. Goals: Webinar  
Discovery Booking, First-Customer View, Lead Magnet Download, Author Page View."
```

```
vk label <id> rajiv-owns
```

```
